

WHAT IS CLAIMED IS:

- 1 1. A connector, to which a module body is electrically
2 connected, comprising:
3 a connector body, having an inner side face defining a
4 chamber which accommodates the module body, the chamber
5 formed with an opening from which the module body is
6 inserted;
7 a first, conductive terminal, provided on the inner side
8 face such that a conductive member formed on an outer
9 periphery of the module body is brought into contact with the
10 first terminal in a case where the module body is plenarily
11 accommodated in the chamber; and
12 a second, grounding terminal, provided on the inner
13 side face and operable to be brought into contact with the
14 conductive member of the module body.

- 1 2. The connector as set forth in claim 1, wherein:
2 the chamber has a rectangular cross section when
3 viewed from the opening; and
4 the first terminal and the second terminal are
5 provided on each of four inner side faces defining the
6 chamber.

- 1 3. The connector as set forth in claim 1, wherein the
2 second terminal is provided at a portion closer to the opening
3 than the first terminal, so that the conductive member of the
4 module body is first brought into contact with the second
5 terminal when the module body is inserted into the chamber.

- 1 4. The connector as set forth in claim 3, wherein the
2 second terminal is formed with a protrusion which engages
3 with the module body in a case where the module body is

4 plenarily accommodated in the chamber.

1 5. The connector as set forth in claim 1, wherein the first
2 terminal and the second terminal are extended in a direction
3 parallel to an inserting direction of the module body.

1 6. The connector as set forth in claim 1, wherein the
2 module body is a camera module.
